Note: Enrollments are class enrollments and not student headcounts. Student semester hours (SSH's) are calculated by multiplying the number of enrolled students in a class by the number of class credits, thus, 30 students in a three credit course generate 90 SSH's. Graduate SSH's may be slightly higher in this table than in Table 3.12 because this table includes late, off-campus registrations. This table is interpreted in the following manner. For example, reading across the row, undergraduates with majors in the School of Business generated 15,334 SSH's in Fall 1999. Sixty-eight percent, or 10,463, were from courses taken in the School of Business. The remaining 4,871 SSH's that Business School majors generated were distributed among the other school and colleges. Reading down the first column, 15,100 SSH's were generated in the School of Business. Sixty-nine percent, or 10,463, were from courses taken by students with majors in the School of Business. The rest of the school's SSH's were produced from students with majors in the other school/colleges.
